PROFESSIONAL SUMMARY

Computer Science graduate and aspiring software developer with hands-on experience building web and mobile applications, REST APIs, database-backed systems, and computer-vision solutions. Developed a QR Attendance application using React Native with offline attendance storage and synchronization with a Laravel backend. Interested in secure, reliable, and user-focused software systems.

EDUCATION

Bachelor of Science in Computer Science

University of Mindanao Tagum College | 2022–2026

Information and Communications Technology (ICT)

STI College of Tagum | 2020–2022

TECHNICAL SKILLS

Programming: Java, Python, C#, PHP, JavaScript, TypeScript

Web & Mobile: React, React Native, Vite, HTML, CSS, Bootstrap, Laravel

Backend & APIs: FastAPI, REST APIs, WebSockets

Databases: MySQL, SQLite, SQL Server

Tools & Platforms: Git, Visual Studio Code, Figma, Android Studio, Linux

Software Engineering: CRUD applications, UML diagrams, Waterfall methodology, troubleshooting

PROJECTS

QR Attendance System — React Native & Laravel

Mobile attendance application designed to support event-based QR scanning and offline operation.

- Built the mobile application with React Native and connected it to a Laravel backend.
- Implemented QR scanning and scanner authentication, with event and participant data synchronized from the server.
- Stored attendance locally in SQLite while offline and tracked pending records in a synchronization queue.
- Worked on synchronization and recovery behavior to support retrying pending attendance records when connectivity returns.
- Developed event-management functionality for creating events, selecting departments and employees, and managing participants through the web backend.

HERD-VISION — AI Lameness Detection (NAFAMCO 2026)

AI-assisted dairy-cow lameness detection and body-condition scoring system.

- Developed a computer-vision pipeline using YOLOv8 pose estimation and temporal models.
- Built a modular FastAPI backend with REST APIs and WebSocket support for live data streaming.
- Created a React, TypeScript, and Vite frontend with real-time processing and inference monitoring.
- Used SQLite for lightweight local data storage and packaged the system as a Windows desktop application.

PAWS4PALS Inventory System (2025)

Inventory management system for a local pet shop.

- Developed inventory-management features for tracking supplies, sales, and stock levels.
- Used React, TypeScript, and SQLite for the frontend and data layer.

Student Information System (2025)

- Created a student-record management application with CRUD functionality using Python and SQLite.

CarMaLuTao Online Store (2024)

- Built a responsive e-commerce website using PHP, CSS, and MySQL, including product listings, cart, authentication, order tracking, and an admin panel.

ADDITIONAL STRENGTHS

Problem-solving • Analytical thinking • Independent and team collaboration • Willingness to learn new technologies
